SECTION 1 Understanding the AACE64™© Framework

A. Why AACE64™© Was Invented

Modern education primarily measures marks, grades and examinations. However, long-term teaching success depends on several deeper Success Abilities that influence learning speed, retention, performance consistency, communication and execution.

To scientifically measure these abilities, during a course of 15 years of penance and working with thousands of students of all age groups, competitive exams' aspirants and working professionals, parents, educators and scientists, YASHHO™ developed the AACE64™ Essential Success Abilities Framework©.

B. What AACE64™© Measures

The framework evaluates 64 Essential Success Abilities across four pillars:

The AACE64™ Framework is an India-invented, world-first scientific human development and performance-intelligence framework designed to measure, map and enhance intrinsic human Success Abilities.

C. The Four Pillars of Success

The framework evaluates **64 Essential Success Abilities** across four foundational pillars:

The framework operates through the YASHHO™ developmental pathway:

D. Why is AACE64™© the World's First?

AACE64™ is regarded as the world's first framework because it integrates scientific ability measurement, behavioural-performance analytics, developmental mapping and structured enhancement within one unified system.

Unlike traditional systems focused mainly on marks or isolated intelligence indicators, AACE64™ evaluates the complete success architecture of an individual across mindset, cognition, communication and execution behaviour through measurable real-world performance observation.

E. Why Does the Framework Use 21 Tasks?

The AACE64™ Framework uses a structured 21-task engagement model to ensure scientific reliability through repeated behavioural and cognitive observation across varied contexts. The tasks include communication, leadership, creativity, decision-making, problem-solving and execution-based activities.

Across these 21 tasks, approximately 630 behavioural and cognitive observations are generated per learner, ensuring that each Essential Success Ability is assessed multiple times for a more holistic and reliable developmental profile.

F. The 15 Essential Educator Success Abilities™ That Drive Teaching Excellence

While the YASHHO™ AACE64™ Framework scientifically measures 64 Essential Success Abilities™ across the four pillars of Attitude, Aptitude, Communication and Execution, not all abilities influence teaching effectiveness to the same extent at every stage of an Acharya's educational journey.

Based on the YASHHO™ research framework, 15 Essential Success Abilities™ have been identified as the most critical drivers of learning effectiveness, examination performance, academic consistency and long-term educational success. The following table explains these 15 Essential Success Abilities™ and why each of them is important for better teaching effectiveness and long-term success.

Assessment Coverage — the Top-15 priority abilities highlighted per pillar (all 64 are measured)

Attitude

Execution

5 / 16

Focused coverage – **15** of **64** Essential Success Abilities™ highlighted as the priority drivers for this stream (all 64 are measured)

Each of these 15 Essential Success Abilities™ is shown below, with a brief note on why it matters for better teaching effectiveness, higher marks and long-term success.

♥ **Attitude** 4 of 15 abilities assessed

Empathy

Young children learn best when they feel emotionally safe. • An empathetic teacher senses a child's mood and meets them where they are — the trust early learning depends on.

Adaptability

No two days with young children go to plan. • An adaptable teacher shifts pace, activity or approach on the spot to keep every child included.

Confidence

A confident teacher reassures anxious little learners and their parents. • Confidence is contagious — it steadies children stepping into school for the first time.

Growth Mindset

The earliest years are where 'I can try and improve' is first learned. • A teacher who models effort and celebrates progress plants a lifelong growth mindset.

Aptitude 3 of 12 abilities assessed

Critical & Analytical Thinking

When a concept doesn't land with a young child, the teacher must work out why and try another way. ▪ Diagnosing the real gap turns a stuck lesson into a breakthrough.

Grasping Ability

Foundation teachers cover many subjects and new activities daily. ▪ Quickly grasping fresh material lets the teacher explain simply and confidently to curious young minds.

Self-Regulation

Young children mirror the adult in the room. ▪ A teacher who stays calm under pressure keeps the class settled and models emotional control.

Communication 3 of 21 abilities assessed

Structure

Little children thrive on predictable, well-sequenced routines. ▪ A clearly structured lesson and day keep young learners settled and engaged.

Active Listening

A young child's confusion is often unspoken. ▪ Listening closely — to words and to behaviour — reveals what a child actually needs before mis-teaching sets in.

Creativity

Abstract ideas become real for young children through stories, songs and play. ▪ A creative teacher makes early concepts memorable and joyful.

Execution 5 of 16 abilities assessed

Planning

Early-years learning is built through carefully planned play and practice. ▪ Good planning turns short attention spans into meaningful, repeated learning.

Discipline

Consistent, gentle routines set the tone for a calm, productive early classroom. ▪ The teacher's own steadiness models the habit young children are still forming.

Receptiveness To Feedback

Early-years practice keeps improving when a teacher welcomes input. ▪ Acting on feedback from mentors and parents sharpens the craft.

Leadership Ability

A foundation teacher leads a room of energetic young children every moment. ▪ Calm, warm classroom leadership keeps learning and behaviour on track.

Decision-Making

Dozens of small in-the-moment calls shape a young child's day. ▪ Sound, quick decisions keep the classroom safe, fair and learning-focused.

G. Understanding Score Zones & Benchmark Colours

AACE64™@ Performance Zone Analysis

PERFORMANCE ZONE	SCORE RANGE	COLOUR CODE	WHAT IT MEANS
Weak	< 50%	● Blue	Significant strengthening required. The ability is currently underdeveloped.
Average	50%–69%	● Yellow	Developing stage. The ability is present but requires further strengthening to achieve higher levels of performance.
Strong	70%–89%	● Green	Good performance level. The ability is reasonably well developed and supports consistent teaching effectiveness.
Excellent	≥ 90%	● Saffron	High-performance level. The ability is highly developed and closely aligned with high achievers and future success benchmarks.

Benchmark Comparison Colour Legend

COLOUR CODE	BENCHMARK	WHAT IT REPRESENTS
 Pillar colour	Student Score	The student's current measured performance — shown as the filled bar in each pillar's own colour — based on the YASHHO™ AACE64™ Success Abilities Challenge™. The All-India ASLI Champion Benchmark appears as a saffron marker on that bar.
 Green	All-India ASLI Champion Benchmark (Age 22+) · AIACB	The level commonly demonstrated by high-performing educators and ASLI Champion teachers.

Understanding Benchmark Gaps

INDICATOR	MEANING
Positive Gap (+)	The student's score is higher than the corresponding benchmark.
Negative Gap (–)	The student's score is lower than the corresponding benchmark.
 Highlighted Cells	Indicate negative gaps and therefore represent priority improvement areas.
Larger Negative Gap	Indicates a greater distance from the benchmark and therefore a higher-priority area for strengthening.

The purpose of benchmarking is not to label or compare students, but to scientifically identify strengths, growth opportunities and the pathway towards stronger teaching excellence and long-term success. For example, if an Acharya scores 78% in Concentration while the All-India ASLI Champion Benchmark is 94%, it indicates that the Acharya is progressing well but still has room to strengthen this ability to reach the All-India ASLI Champion Benchmark. These benchmarks are not intended to compare or label students. Rather, they serve as scientific reference points that help students, parents and

educators understand the Acharya's current position, identify growth opportunities and build a clear pathway towards stronger teaching excellence and future success.

H. 24 VS 64: Why Marks, Scores and Performance Do Not Tell the Full Story

Marks, Scores and Performance are outcomes of a limited set of abilities. Complete Success is the outcome of all 64 Essential Success Abilities™.

In schools, marks matter. In competitive examinations, scores, ranks and selection matter. In corporate life, performance, communication, execution, leadership readiness and career growth matter.

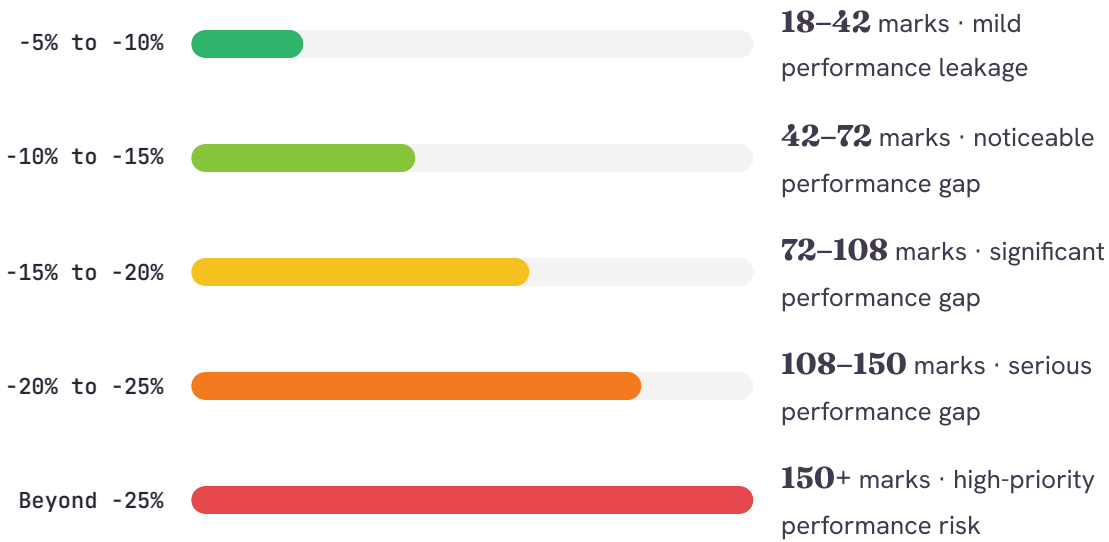

But in every case, the visible outcome is only the final result. Behind that result, there are deeper Success Abilities™ silently shaping how a person learns, prepares, thinks, communicates, decides, performs and grows.

That is why YASHHO™ does not stop with marks, scores or performance alone. **YASHHO deals with all 64 Essential Success Abilities™ — including the core 24 abilities that directly boost marks, scores, ranks and measurable performance.**

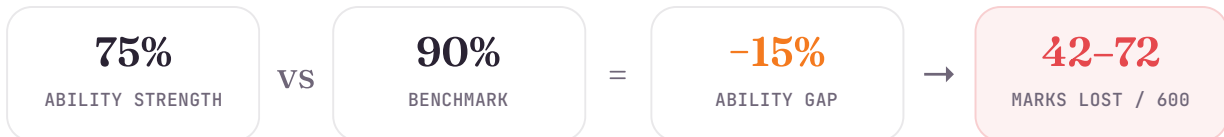

Therefore, the YASHHO™ AACE64™ Scorecard is not merely a marks-improvement report, exam-readiness report or career-readiness report. It is a complete Success Abilities™ map that shows:

- Where the person stands.
- Where the hidden gaps are.
- Which abilities are limiting performance.
- Which abilities can unlock the next level.
- What must be strengthened next.

Ability Gap to Marks / Score / Performance Loss: Indicative Impact Mapping

Example: How a 15% Ability Gap Can Reduce Performance

If a learner, aspirant, candidate or professional is currently at **75% ability strength** in the Top-15 Essential Success Abilities™, while the benchmark requirement is around **90%**, the average gap is approximately **-15%**. This does not mean the person lacks intelligence or potential. It means performance may be getting limited by hidden ability gaps such as weak focus, poor comprehension, careless mistakes, low confidence, weak structure, inconsistent discipline, poor time management, lower problem-solving strength or reduced mental endurance. In a 600-mark examination, such a gap can result in an estimated **42–72 marks loss**. In competitive exams, it can affect rank and selection. In interviews, it can affect expression, confidence and final impression. In corporate performance, it can affect productivity, communication, leadership readiness and career growth.

The YASHHO™ Strengthening Logic

Most systems try to improve outcomes through more classes, more tests, more content, more training or more pressure. **YASHHO™** works at the root.

Through the World's First, India-Invented AACE64™ Essential Success Abilities Scientific Strengthening Framework, YASHHO™ scientifically scans, maps, benchmarks and strengthens the inner abilities that drive performance.

That is why YASHHO™ focuses on strengthening the person up to **minimum 2× and more** across the Success Core™ — not merely pushing for marks, scores or performance, but building the inner ability architecture that produces: **Marks • Scores • Ranks • Selection • Confidence • Communication • Careers • Success • Happiness.**

Important Note: The boxes highlighted in red indicate a negative gap, meaning the Acharya's score is lower than the corresponding benchmark score. A larger negative gap signifies a greater distance from the benchmark and therefore represents a higher-priority area for improvement. These abilities require additional focus, practice, guidance and strengthening efforts to help the Acharya progressively move towards the All-India ASLI Champion Benchmark.

AACE64™© IntelliGraph

Benchmark Positioning

student vs the ASLI

Champion benchmark

The IntelliGraph visually represents the Acharya's success architecture relative to the All-India ASLI Champion Benchmark. It helps identify the strongest pillars, the developing pillars, the priority improvement areas, and the readiness level for stronger teaching excellence.

How to read: each bar shows how that pillar's abilities spread across the four zones (Weak → Excellent, left to right). Compare your top bar to the All-India ASLI Champion Benchmark below it — stronger profiles carry more green and saffron (Strong & Excellent).

Top 15 Essential Success Abilities™ Analysis

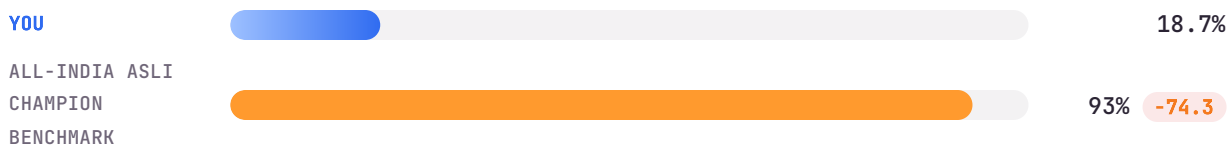

ordered by
priority

i The Essential Success Abilities measured in this assessment have been ranked based on their relative importance and impact on the learner's present stage, goal, age group and success pathway. This ranking does not indicate the individual's current performance level — it indicates the priority and significance of each ability in influencing learning effectiveness, classroom effectiveness, competitive readiness, career preparedness, workplace performance and long-term success outcomes.

How to read: for each ability, your score (blue) sits beside the All-India ASLI Champion Benchmark. Abilities marked **FOCUS** are the ones furthest below the ASLI Champion benchmark — strengthen these first.

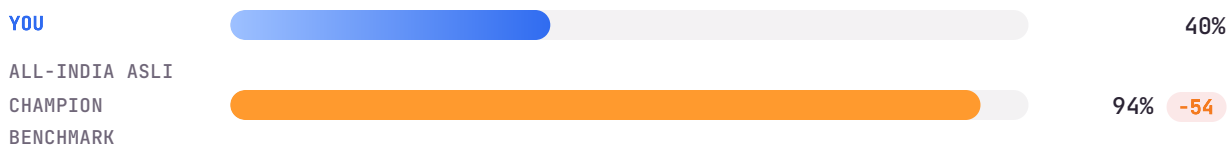

Empathy

FOCUS

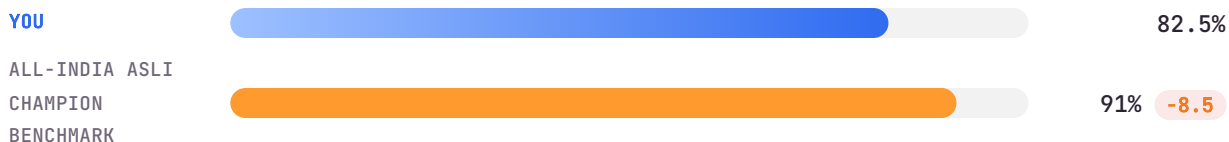

Top priority — 74% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

Critical & Analytical Thinking

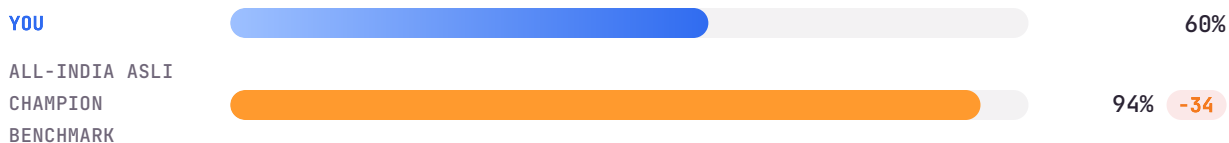

Needs work — 54% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

Structure

Needs work — 9% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

Grasping Ability

Needs work — 34% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

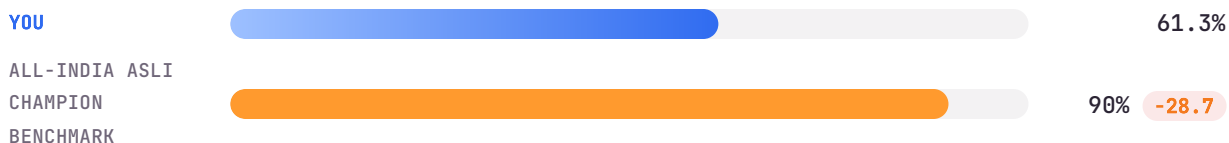

Adaptability

FOCUS

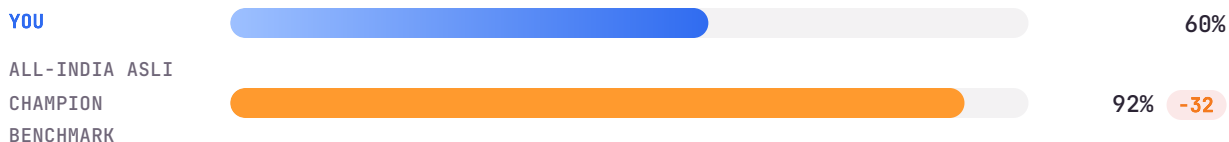

Top priority — 72% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

Active Listening

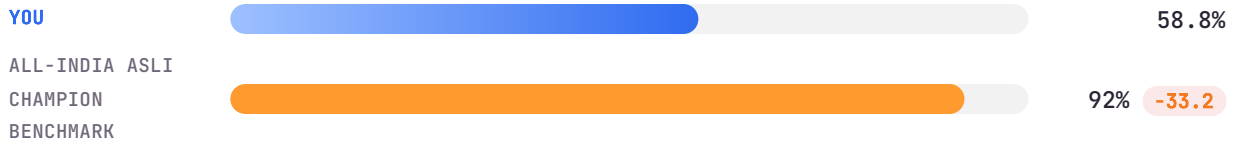

Needs work — 29% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

Planning

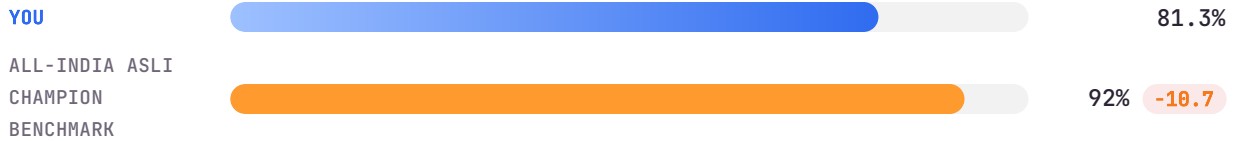

Needs work — 32% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

Creativity

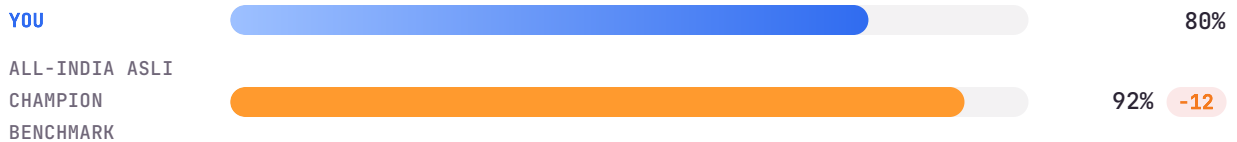

Needs work — 33% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

Discipline

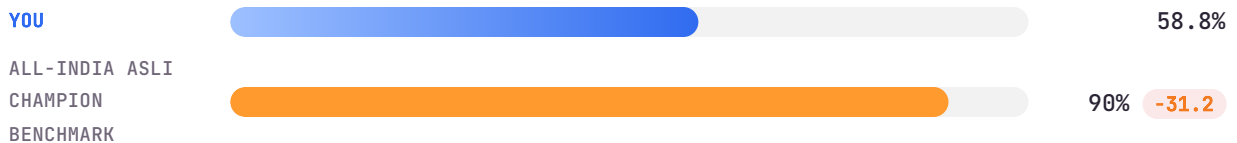

Needs work — 11% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

Receptiveness To Feedback

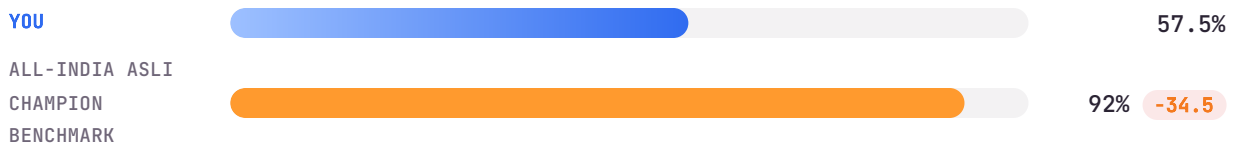

Needs work — 12% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

Leadership Ability

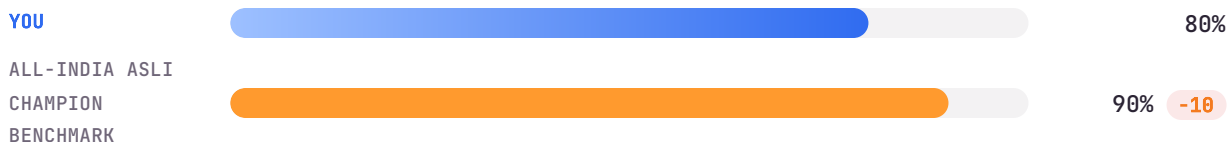

Needs work — 31% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

Decision-Making

Needs work — 35% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

Self-Regulation

Needs work — 10% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

Confidence

Needs work — 69% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

Growth Mindset

FOCUS

Top priority — 73% below the ASLI Champion Benchmark — focused strengthening here yields the biggest gains.

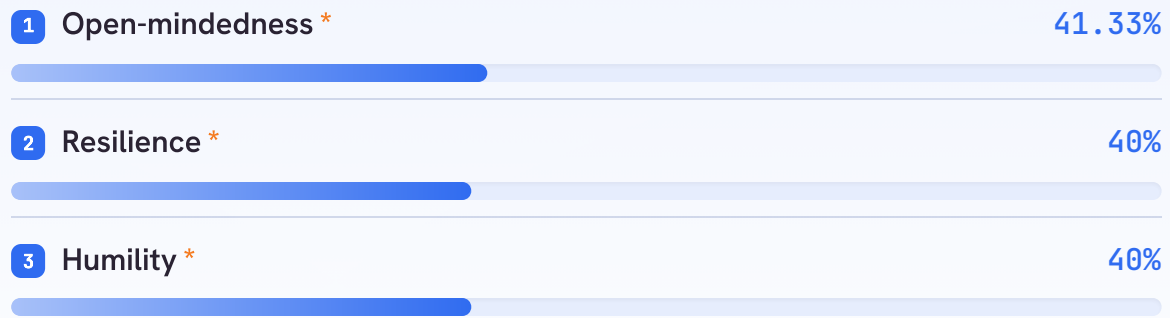

SECTION 5 Pillar Strengths

the abilities to lean on

Presented below are the three strongest Essential Success Abilities™ identified within each of the four AACE64™© pillars. These abilities represent some of the Acharya's most developed strengths among the 64 Essential Success Abilities™ measured under the framework. They highlight areas where the Acharya currently demonstrates greater natural inclination, capability and readiness compared to many other abilities in the profile.

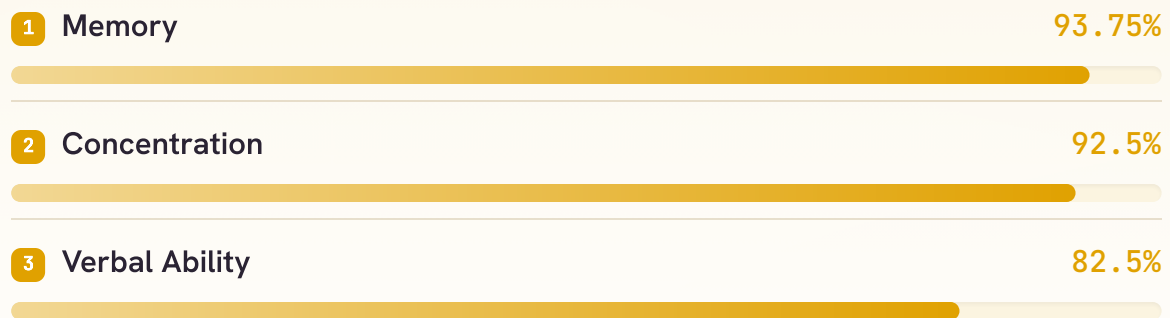

● Attitude

TOP STRENGTHS

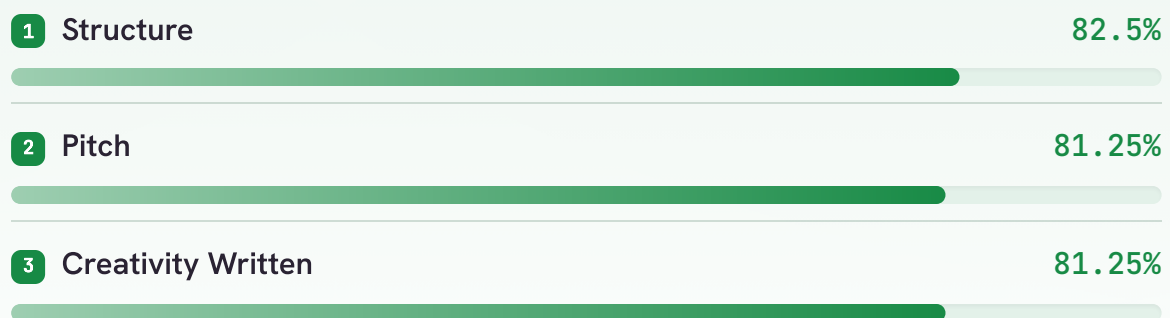

● Aptitude

TOP STRENGTHS

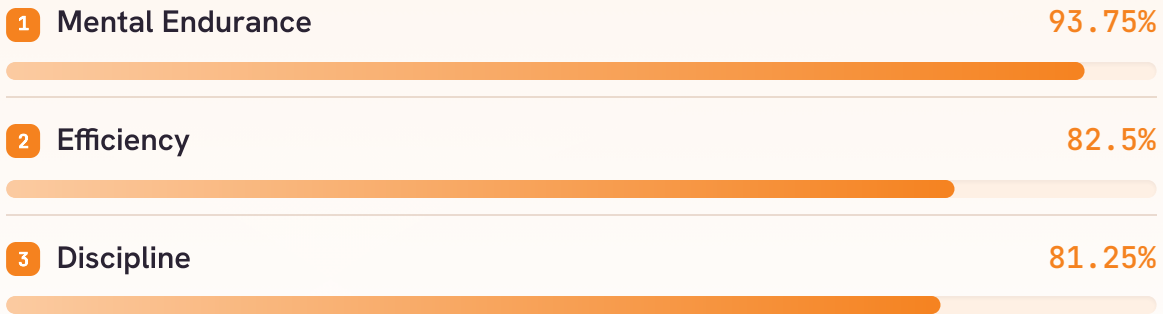

● Communication

TOP STRENGTHS

● Execution

TOP STRENGTHS

Important Note: For a success ability to be considered a strength and appear in the Top 3 Essential Growth Abilities (Strengths), its percentage must be above 60%. If a success ability is marked with an asterisk (*), it means its percentage is $\leq 60\%$. The listed abilities are the “next best” but do not meet the minimum criteria for a strength, indicating that the Acharya needs to work harder, even if a Top 3 is shown.

SECTION
6

Priority Areas for Improvement

where focused effort pays off

Presented below are the three Essential Success Abilities™ with the lowest scores identified within each of the four AACE64™© pillars. These abilities represent the Acharya’s most important developmental priorities among the 64 Essential Success Abilities™ measured under the framework. Lower scores in these areas may influence teaching effectiveness, learning effectiveness, personal growth, communication effectiveness and overall success readiness. Identifying these priority improvement areas is an important first step towards meaningful development. By systematically strengthening these abilities, the Acharya can reduce performance gaps, build a stronger Success Core™, strengthen teaching outcomes and move closer to achieving his or her full potential.

● Attitude

FOCUS NEXT

Courage

18.67%

Teaching Impact: Fear of failure or criticism can prevent educators from addressing problems, trying new methods, or advocating for students.

Support Spot: Take well-prepared professional risks, raise concerns respectfully, and act in students' best interests.

Empathy

18.67%

Teaching Impact: Difficulty understanding students' emotions and circumstances can lead to misjudging behaviour or learning difficulties. Support may become generic rather than learner-specific.

Support Spot: Listen without premature judgment, observe emotional cues, and respond to the learner behind the behaviour.

Growth Mindset

18.67%

Teaching Impact: Treating ability as fixed can result in labelling students and underestimating improvement. Educators may also stop developing their own practice.

Support Spot: Emphasize effort, strategy, feedback, and progress; communicate that both students and teachers can improve.

● Aptitude

FOCUS NEXT

Critical & Analytical Thinking

40%

Teaching Impact: Limited analysis can lead to superficial explanations, weak questioning, and decisions based on assumptions rather than evidence.

Support Spot: Compare evidence, examine causes, question assumptions, and use higher-order questions in lessons.

Imagination

40%

Teaching Impact: Limited imagination can make abstract ideas difficult to teach and lessons less memorable. Students receive fewer opportunities to visualize possibilities.

Support Spot: Use analogies, scenarios, stories, models, and creative applications of concepts.

Attention-to-Detail

60%

Teaching Impact: Missed details can create errors in assessment, instructions, records, and student feedback. Small inconsistencies may appear unfair.

Support Spot: Use checklists, verify marks and instructions, and review work before sharing or submitting it.

● Communication

FOCUS NEXT

Eye Contact

37.5%

Teaching Impact: Limited or uneven eye contact can weaken connection and leave parts of the classroom unmonitored.

Support Spot: Distribute natural eye contact across the room while respecting individual comfort and culture.

Pacing Pause

37.5%

Teaching Impact: Speaking too fast can overwhelm learners; speaking too slowly can reduce attention. Missing pauses limits processing and note-taking.

Support Spot: Adjust pace to difficulty and use purposeful pauses after questions and key ideas.

Pronunciation

37.5%

Teaching Impact: Unclear pronunciation can confuse learners and model incorrect language use, especially in early and language-learning classrooms.

Support Spot: Check unfamiliar terms, practise aloud, and use reliable pronunciation references.

● Execution

FOCUS NEXT

Dressing Personal Hygiene

42.5%

Teaching Impact: Poor grooming or unsuitable attire can affect professional presence, comfort, and confidence in school interactions.

Support Spot: Maintain clean, appropriate, practical attire and consistent personal hygiene.

Uniqueness

42.5%

Teaching Impact: Suppressing personal strengths can make teaching imitative and less authentic. Valuable local context and individual talent remain unused.

Support Spot: Develop a distinctive teaching strength while staying aligned with curriculum and learner needs.

Decision-Making

57.5%

Teaching Impact: Delayed or inconsistent decisions can allow classroom problems to grow and create perceptions of unfairness.

Support Spot: Use evidence, policy, learner welfare, and likely consequences to make timely decisions.

These are observed strengthening ranges across participating learners, not guarantees. Actual improvement depends on the learner's starting point, regular participation, consistency, mentor/guardian support and sustained practice.

YASHHO Declaration: Analysis of the AACE64™© Scorecard

This AACE64™ Success Scorecard reflects the Acharya's current Success Abilities™ profile based on performance across 21 scientifically designed Success Strengthening Tasks™ that generate approximately 630 behavioural, cognitive and performance-related observations. The analysis is conducted using the YASHHO™ AACE64™ Framework, the World's First India-Invented Scientific Success Abilities Framework™.

The framework measures 64 Essential Success Abilities™ across four pillars—Attitude, Aptitude, Communication and Execution—and compares the Acharya's profile against the All-India Developmental Benchmark™, All-India ASLI Champion Benchmark™ and All-India Competitive Exam Success Aspirational Benchmark™.

The results presented in this Scorecard are not fixed indicators of intelligence, talent or future potential. Rather, they provide a scientific snapshot of the Acharya's current strengths, developmental opportunities and benchmark alignment. As Success Abilities™ can be strengthened through awareness, guidance, practice and experience, these scores may improve significantly over time.

The purpose of this analysis is not to label or rank students, but to provide meaningful insights, clear developmental direction and a measurable pathway towards stronger teaching effectiveness, career readiness and long-term success.

Issued in good faith by iRisePro™ Academy for Human Excellence.
